

Oil & Gas Pre-Operations Services

Services

Oil & gas operating companies are challenged with the task of completing projects according to the approved Capital Expenditure (CAPEX) budget. Kizer Energy services focuses in providing high level technical expertise that will impact the operability and reliability of your production facilities and will optimize the Operating Cost (OPEX) through the complete asset life cycle.

Kizer Energy's flexible and agile team of professionals focuses on delivering a suite of solutions that addresses your most critical operational issues. Our services ensure a successful transition from construction mechanical completion to production operations.

Kizer Energy Pre-Operations Services are:

Operations Consulting and Project Implementation.

Operations Consulting

Kizer Energy Operations Consulting focuses in providing technical expertise, best practices, technology and project management support to our clients. We can supplement your project teams with senior consultants that will provide you with the required experience and technological background to address specific needs.

Kizer Energy consultants will come to your facilities and project team offices to provide the required support and deliver the agreed scope of work. Our consultants will also be integrated to a **Project Implementation** Team to deliver the philosophy and strategy documents that are the foundation of a successful project.

Decisions regarding operability and asset integrity may impact your plant design basis during development by EPC firms. Therefore, we involve our consultants with your operations team early in the project in order to deliver the most value all the way through the project life cycle.

Project Implementation

Kizer Energy Project Implementation services addresses the development of all philosophies, strategies, plans, systems, personnel, training, and logistics required for the operation of a new production facility. Our Project Implementation services are mostly applicable to new topsides upstream production facilities, refineries, petrochemical and other oil & gas processing facilities.

Kizer Energy offers a phased approach to Project Implementation in order to be fully aligned with the EPC project schedule. This methodology will also provide an optimal level of definition at each phase, and will meet the Operations Planning Milestones required by the Operating Company Management.

Below is an example of our **Project Implementation** Phases:
